

AJAY KUMAR KONDETI

Software Engineer | Telecom BSS & Billing Integration | APIs & DevOps | Building AI Agents for Telecom

Hyderabad, India | ajay206.k@gmail.com | linkedin.com/in/ajay-kumar-kondeti | github.com/ajay206

PROFESSIONAL SUMMARY

Software Engineer with 4+ years at CSG (including internship) building, integrating and supporting telecom billing (BSS) systems on CSG SingleView for enterprise customers across multiple countries. Led a SingleView v9-to-v12 upgrade across 14 countries covering millions of accounts and a Starlink integration rollout across 9 countries. Hands-on with REST/SOAP API development, system integration, Oracle SQL and PostgreSQL, and Docker and Kubernetes on Linux. Now applying this telecom domain depth to AI integration: building BillPilot, an ongoing portfolio project that puts an AI agent with human approval on top of a mock telecom billing system exposed through TM Forum-style APIs.

TECHNICAL SKILLS

Telecom BSS & Billing: CSG SingleView (CM, CB), Telecom BSS, Enterprise Billing Systems, Rating & Billing Configuration, Invoicing, Billing Migrations & Platform Upgrades

APIs & Integration: REST APIs, SOAP APIs, API Development, System Integration

Languages & Scripting: EPM (SingleView scripting language), Perl, SQL (daily); Python (basic)

Databases: Oracle SQL, PostgreSQL

DevOps & Platforms: Jenkins, CI/CD, Git, GitHub, Docker, Kubernetes, Ansible, Linux, Azure DevOps

Operations & Ways of Working: Production Support, Incident Management, Root Cause Analysis, Troubleshooting, Agile, Jira

Currently Learning (via BillPilot): LLM Tool-Calling Agents, Retrieval-Augmented Generation (RAG), TM Forum Open APIs

PROFESSIONAL EXPERIENCE

Software Engineer | CSG

Aug 2022 - Present

Hyderabad, India

- Led the CSG SingleView platform upgrade from v9 to v12 across **14 countries** covering **millions of accounts**, with an 8-person team per upgrade; delivered this major upgrade within a planned 6-hour downtime window.
- Delivered the **Starlink** integration deployment across **9 countries within 3 weeks**; demoed the solution to CSRs and OPCO clients and replicated the change across all other OPCOs. Recently launched, with tens of customers onboarded so far.
- Migrated **~400 enterprise customers** and **~2,500 services**, including their balances, from manual to automated billing with **no downtime**.
- Built a reusable, configuration-driven outbound REST API framework that nearly all current and all new REST APIs are built on; new APIs are set up through configuration instead of writing new functions each time. Developed **5 production APIs** for enterprise integrations.
- Developed real-time customer notifications and an automated email reminder system used by enterprise customers across multiple regions.
- Built SQL-based reporting and automation for billing operations, giving the operations team ready-made reports so they no longer write and maintain their own SQL queries.
- Streamlined invoice generation and balance confirmation workflows through process automation.
- Worked directly with enterprise customers to troubleshoot and resolve production issues through root cause analysis, and provided technical consultation.
- Implemented **6 customer-driven product enhancements** to the platform.

SDE Intern | CSG

Mar 2022 - Jul 2022

- Configured telecom rating and billing solutions.
- Developed and tested UI components and reusable software components.

PROJECTS

BillPilot – AI Copilot for Telecom Billing & Operations

Ongoing

Portfolio project | 100% synthetic data

- Designing and building an AI copilot over a mock telecom BSS, with separate role-based assistants for customers, customer service reps (CSRs) and operations teams.
- Designed the integration layer as mock BSS APIs modelled on TM Forum Open APIs (TMF678 Customer Bill, TMF635 Usage, TMF620 Product Catalog, TMF676 Payment, TMF621 Trouble Ticket), the agent's only access path to billing data.
- Planned agent flow: LLM tool calling plus RAG with source citations over policy, tariff and runbook documents, input/output guardrails, and a human approval queue for any change to money or service, with every step audit-logged.
- Designed a 23-table PostgreSQL billing data model with a synthetic data generator and planted billing anomalies (e.g. double charges) plus a ground-truth answer key, to drive an evaluation harness (target: 50–100 labelled cases).
- Planned stack: FastAPI, PostgreSQL, Kafka (Redpanda), Langfuse tracing, Docker Compose, GitHub Actions.

DevOps Automation Project

- Built a CI/CD pipeline using Jenkins, GitHub, Docker, Ansible and Kubernetes to automate application build, containerisation and deployment.
- Improved deployment consistency and reduced manual deployment effort.

EDUCATION

B.Tech, Computer Science | G. Pulla Reddy Engineering College, Kurnool
CGPA: 8.2/10

2022

AWARDS

- Spotlight for Excellence Award, CSG (2024)
